**OGSI Announces Use of New and Improved
Molecular Sieve in Its Oxygen Generators**

Oxygen Generating Systems Intl. [*OGSI*] would like to announce that it has changed the molecular sieve that we use in our machines to a *new and improved* grade of material.

Because of this change, we will be modifying our performance specifications to reflect the enhanced performance of the oxygen generators in both delivery pressure and flow.

We expect that when we restate our specifications, the new pressure and performance specifications will increase by 10-20% for all models.
